EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in an interview with Mr. Trevor Coddington on August 15, 2007.

The application has been amended as follows:

The title:

The title has been replaced with the new title as follows:

KNOWLEDGE DISCOVERY METHOD WITH UTILITY FUNCTIONS AND
FEEDBACK LOOPS

In the claims:

Claims 39, 51-53 have been amended as follows:

39. (Currently Amended) A method for performing knowledge discovery comprising the steps of:

associating with each member of a data corpus one or more metatags through execution of a ranking function, wherein said ranking function is controllable through a parameter value;

selecting a first subset of members from said data corpus whose associated metatags are a match to a first set of criteria;

processing said first subset of members to produce a set of pairwise associations between elements of each of said first subset of members;

selecting a subset of said set of pairwise associations that reach a certain predefined or preset value;

identifying a second subset of members from said data corpus based on said subset of said pairwise associations;

computing a utility function to measure a utility ~~associated with~~ of said second subset of members;

adjusting said parameter value to an adjusted parameter value based on said utility function;

associating one or more members of said data corpus with one or more retrospective metatags through execution of said ranking function controlled by said adjusted parameter value; and

selecting a third subset of members from said data corpus whose associated metatags are a match to a second set of criteria.

51. (Currently Amended) A method for performing knowledge discovery, the method comprising the steps of:

determining a first degree of correlation among a data corpus;

metatagging members of said data corpus with metatags according to a metatagging scheme, wherein said metatagging scheme employs a first level of knowledge representation for said first degree of correlation and employs at least a second level of knowledge representation for a second degree of correlation among data, wherein said step of ~~indexing~~ metatagging is controllable through a parameter value, and wherein said first and second levels of knowledge representation are representative of different degrees of correlation among data;

determining said second degree of correlation among a first subset of said data corpus;

identifying a second subset of members from said data corpus based on said second degree of correlation among said first subset of said data corpus;

computing a utility function to measure a utility of said second subset of members;

adjusting said parameter value to an adjusted parameter value based on said utility function;

remetatagging said members of said data corpus with metatags according to said metatagging scheme, wherein said step of remetatagging is controlled through said adjusted parameter value [[.]] and;

selecting a third subset of members from said data corpus whose associated metatags are a match to a first set of criteria.

52. (Currently Amended) The method of claim 51, further comprising the step of selecting said first subset of members from said data corpus whose metatags are a match to a second set of criteria.

53. (Currently Amended) The method of claim 52, further comprising the step of selecting a second subset of said data corpus whose metatags are a match to said second set of criteria.

Allowable Subject Matter

2. Claims 39-45, 47-58, 60-73 are allowed. (Re-numbered as 1-33)

3. The following is an examiner's statement of reasons for allowance:

Prior art of record does not teaches the combination of claimed element including the step of computing a utility function to measure a utility of said second subset, adjusting said parameter value to an adjusted parameter value based on said utility function and associating one or more members of said data corpus with one or more retrospective metatags, which is controlled by said adjusted parameter value as recited in independent claims 39 and 51. Dependent claims are also allowed at least by virtue of their dependency to the respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
